

make room for life

The Sanus **LF228B** is a new **Full-motion Mount** for large flat panels that extends a full 70cm from the wall, allowing viewers to tilt, swivel, pan and extend to their hearts content. Sanus is big on innovation and the **LF228B** features an engineering first: **Follow Thru™** Technology which conceals cables through the elbow for a truly flawless look. Since the interface is pre-assembled and the arms are now mounted directly to the wall plate, installation is even easier. **Virtual Axis™** for effortless tilting and **Pro Set™** for post-installation height and leveling adjustments. Like all Sanus Visionmounts it is **UL™** Certified. Part of that process is that each mount, when installed correctly, will hold four times its rated weight capacity (in this case 61kg) for a minimum of one minute before coming off the wall. When you think safety, think Sanus. www.sanus.com.au
