

make room for life

HEIGHT/LEVEL ADJUSTMENT

CLICKSTAND CABLE INSTALL

QUICK RELEASE TABS

The Sanus **LL22B** Low profile mount is designed to make installation a breeze. The new Sanus wall-plate design is manufactured with 6061-T6 extruded aluminium alloy, the same alloy used in the construction of high performance aircraft, yachts and cars. The **LL22B** has **quick-release tabs** that enable the TV to unlock instantly from the wall plate for easy installation. **Click Stand™** allows the TV to be held away from the wall whenever you need to get at the cables; it then clicks securely back on the wall. **Pro Set™** is another new feature, ensuring the TV is perfectly positioned after installation on the wall. With the new design, it also pays particular attention to open architecture for cable and power placement with a finish that looks great from any angle. It will hold up to a 60" (152cm) flat panel TV and is **UL™** Certified to hold 79kg. Remember - when you think safety, think Sanus. www.sanus.com.au
