VIRTUAL AXIS TILTING

CLICKSTAND CABLE INSTALL

PROSET ADJUSTMENT

It's been a big year at Sanus Systems™. We've revolutionized the industry again with new Mounts such as the **LT25B**. New technology makes installation faster and easier – sure to become the new industry standard. The LT25B is designed to hold up to 60" (152cm) flat panel TV. When you buy the LT25B you've got the absolute latest in technology. A wall plate with open architecture for cable and power placement. One of the most frustrating parts of installing a flat panel on the wall can be getting the TV level – even after you throw a level on top of the wall plate; you realize the ceiling is out. With **Pro Set™** you now have height and leveling adjustments post installation. **Click Stand™** is another Sanus innovation which allows you to hold the TV out from the wall for easy cable installation, then clicks back securely on the wall. **Virtual Axis™** completes the picture by allowing you to tilt the TV with just the touch of a hand. Weight capacity is 79kg. When you think safety, think Sanus. Don't forget to check out www.sanus.com.au
