

make room for life

The **Sanus XF228** features a major innovation – **Follow Thru™** Technology which is an **in-arm wire management channel** that protects and conceals cables – even through the elbow, for a truly flawless look. The **New Full Motion Mount** for extra large flat panels up to 63", has the ability to extend up to 70cm from the wall and is **UL™** certified to carry 90 kg. Part of that process is that each mount, when installed correctly, will hold four times its rated weight capacity for a minimum of one minute before coming off the wall. Installation is a breeze, since the interface is pre-assembled and the arms are now mounted directly to the wall plate. Features include **Pro Set™** for post-installation height and leveling adjustments and **Virtual Axis™** for effortless tilting. When you think safety, think Sanus. Check it out and much more on www.sanus.com.au
